DETAILED ACTION

Election/Restriction

1. This application is a 371 of PCT/US99/11497. For applications filed under 371, PCT rules for lack of unity apply.

2. This application contains inventions or groups of inventions which are not so linked as to form a single inventive concept. Under PCT Rule 13.1 the following combinations of claims of different categories are permissible and restriction to one of the following combinations is required:

- 9f
- I. Claims 1-6, ⁹~~10~~ 15, drawn to a purified polypeptide, the polynucleotide encoding it, an expression vector comprising said polynucleotide, a host cell comprising said vector, a method of producing the encoded polypeptide.
 - II. Claims 7-8, drawn to a method for detecting a polynucleotide.
 - III. Claim 16, drawn to a purified antibody.
 - IV. Claim 17, drawn to a purified agonist.
 - V. Claim 16, drawn to a purified antagonist.
 - VI. Claim 19, drawn to a method of treating or preventing a disorder by administering a pharmaceutical composition.
 - VII. Claim 20, drawn to a method of treating or preventing a disorder by administering an effective amount of an antagonist.

Pursuant to 37 C.F.R. 1.475(d), this Authority considers that the main invention in the instant application comprises the first-recited product, to a purified polypeptide, the polynucleotide encoding it, an expression vector comprising said polynucleotide, a host cell comprising said vector and a

method of producing said polypeptide. Further, pursuant to 37 C.F.R. 1.475(b)-(d), the ISA/US considers that the materially and functionally dissimilar products of groups III-V and the additional methods of groups II, VI-VII do not correspond to the main invention. This Authority therefore considers that the several inventions do not share a special technical feature within the meaning of PCT Rule 13.2 and thus do not relate to a single general inventive concept within the meaning of PCT Rule 13.1.

Additional Restriction Requirement

3. The claims of Groups I-VII are drawn to a multitude of polypeptides (SEQ ID Nos: 1-9) and nucleic acids (SEQ ID Nos: 10-18). This constitutes a recitation of an implied, mis-joined Markush group that contain multiple, independent and distinct inventions. Each of the polypeptides and nucleic acids are independent and distinct because no common structural or functional properties are shared. Accordingly, these claims are subject to lack of unity under PCT Rule 13.1

Upon election of one of Groups I-VII, Applicant is additionally required to elect a single polypeptide or nucleic acid. This requirement is not to be considered as a requirement of an election of species, since each of the compounds recited in alternative from is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1647

amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
